

FEDGESTTM

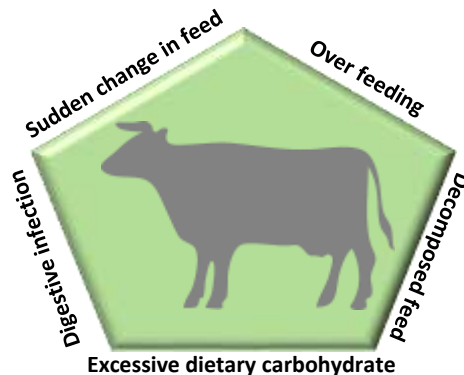

Brings back appetite & normalizes body condition

FEDGEST™

Anorexia and inappetence are very common in farm animals and reasons are multiples. Following are common notable symptoms resulting into off-fed

- Sudden stoppage of normal feed intake
- Less feed intake
- Diarrhea
- Bloat
- Dung with foul smell

FEDGEST

- **Corrects rumen function with the goodness of probiotics and prebiotics and reestablish helpful rumen flora**

Composition:

- ✓ Saccharomyces cerevisiae 10 Billion CFU
- ✓ Saccharomyces boulardii 2.5 Billion CFU
- ✓ Bacillus amylolequefaciens 2.5 billion CFU
- ✓ Prebiotic (MOS & Beta glucan) 1g

Saccharomyces cerevisiae	Saccharomyces boulardii	Bacillus amylolequefaciens	Prebiotic
Improves fiber digestion & reduces lactic acid formation. Reduces oxygen and favors growth of helpful rumen microbes	Prevents acidosis & corrects rumen pH, improves number of essential rumen microflora	Secrets enzymes for starch digestion and reduces lactic acid production	Stimulates local immune system and binds ruminal toxins and eliminates from digestive system

Indication:

- Reduces or loss of appetite
- Anorexia or off-fed due to prolonged oral antibiotic treatment
- As supportive in any diseases condition when digestive efficiency gets reduced

Recommended Usage: By oral route in Large ruminants: 2 boli daily and in small ruminants: 1 bolus daily

Presentation: Strip of 4 bolus
